# Udyam Digital

Get a small business online in one sitting — discover, buy, verify and track on a phone, in its own language.

**Track A · Accel Business · YTL Hackathon 2026**

Platform Partner unstop

# Only 7 in 100 interested small businesses ever get connected — and most drops are our process, not their choice

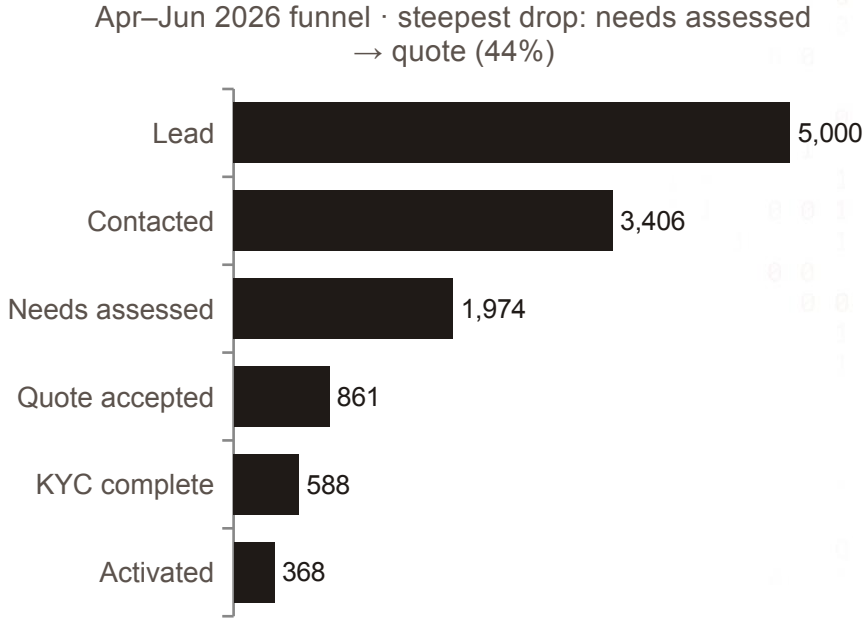

**7.4%**
of 5,000 leads activate

**17.6 days**
from lead to live

**3×**
status chases per customer

**₹15,053**
to acquire one SMB

**54% of drops are process failures**
no visit scheduled, unreachable, quote too slow or complex, paperwork, install delays — all removed by a self-serve journey

Platform Partner unstop

# Start where digital pays: professional offices and micro shops online, partners on the high-value end

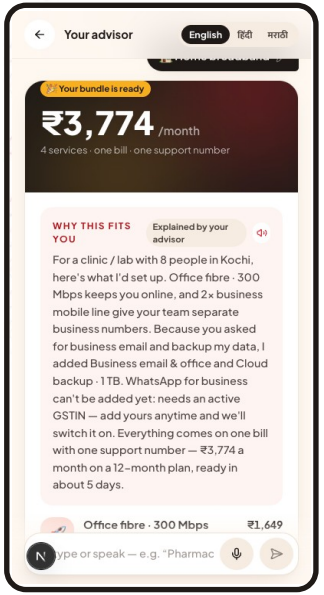

| Segment (share of leads) | Today: activation · median bill · CAC · churn | Our play | Starter bundle (from the rules engine) | Price · contract |
|---|---|---|---|---|
| **1 · Professional offices (25%) clinics, CA firms, coaching** | 11.1% · ₹6,575 · ₹10,694 · 13.8% | Digital-first, wave 1 | Fibre 300 + 2 business lines + email ×6 + 1 TB backup; add failover | ₹3,774/mo (12 m) ₹3,346 on 36 m |
| **2 · Micro retail (54%) kirana, pharmacy, salon** | 4.1% · ₹2,470 · ₹20,007 · 22.7% | Digital-only, zero-touch; CAC must fall ~8× | Fibre 100 (or AirFiber) + 2 lines + billing & UPI tablet; WhatsApp once GST is active | ₹2,546/mo (12 m) +₹2,500 setup |
| **3 · Multi-site (15%) chains of 3–12 outlets** | 11% · ₹28,080 · ₹15,614 · 10.8% | Digital quote, partner closes | Per outlet: Fibre 300 + failover + SD-WAN + billing + 2 CCTV | ₹39,267/mo for 6 outlets (24 m, SD-WAN) |
| **4 · Manufacturers (5%) auto-parts, textile units** | 12.8% · ₹15,910 · ₹15,324 · 8.1% | Field-led; digital KYC + tracker | Leased line 20 + 2 lines + 6 CCTV + 4 machine sensors | ₹13,588/mo (24 m) |

Why this order: professional offices activate at 11% with low churn and buy cloud add-ons; micro shops are half the leads but cost ₹20k to win via visits against a ₹2.5k bill — only a near-zero-touch journey makes them profitable. Prices are the catalogue's midpoint on 12 months, falling to the floor on 36.

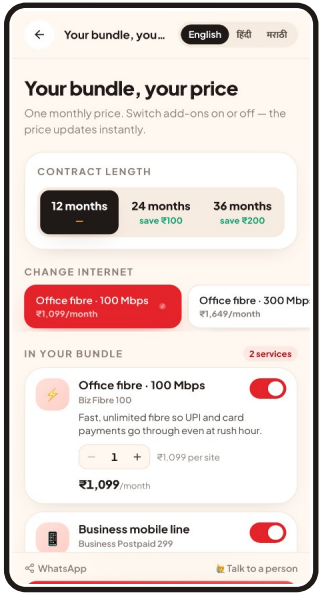

Platform Partner unstop

# One journey on the owner's phone: four screens, no visit

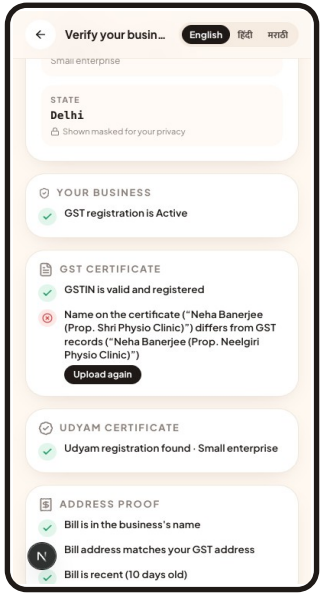

## 1 · Advisor

Tap, type or speak in English, हिंदी or मराठी; bundle builds live

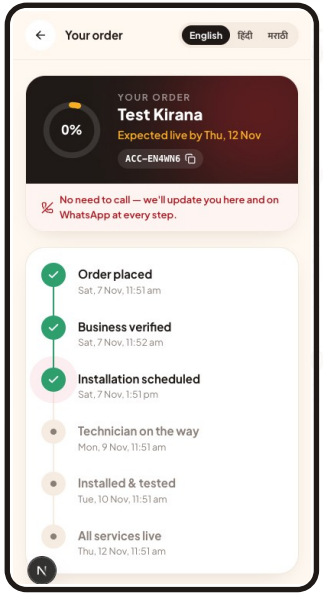

## 2 · Quote

One monthly price; toggle add-ons, switch speed, pick contract

## 3 · Smart KYC

Read on the phone, checked against GST & Udyam records

## 4 · Tracker

Live stages and install slot — no follow-up calls

# Needs discovery without a salesperson: rules decide, AI explains

1

## Owner speaks

Taps 6 chips or says “dental clinic in Kochi, 8 people, no GST” — EN / हिं / मरा, voice or text

2

## Understand

On-device parser in 3 languages; NVIDIA NIM / Sarvam fill gaps when keys are set

3

## Decide

Rules engine over the 25-product catalogue: city tier, staff, sites, active GSTIN, dependencies

4

## Price

One monthly price + setup + GST; contract slider; add-ons owners can toggle

5

## Explain

Plain-language “why this fits you”, streamed; what's not included and why

**0**

ineligible products recommended across 15 judge-style scenarios + 400 random profiles (unit-tested)

**<100 ms**

for the bundle to update after a tap — no network round-trip; AI text streams in

**3.5 s**

hard timeout on every AI call, then a template answer — the screen never hangs

# KYC in five minutes, with privacy built in: documents never leave the phone

Consent per purpose | Blur check | Auto-straighten | **On-device OCR** | Checksum + registry | Verdict + one-tap fix

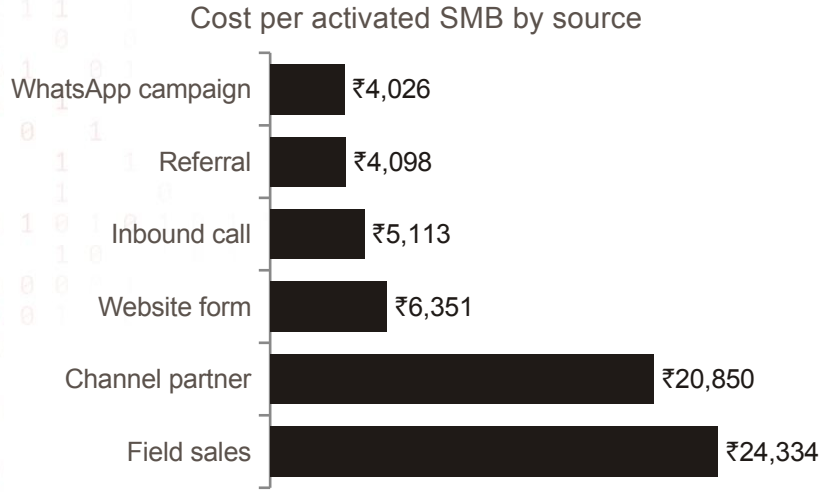

| Applicant | Planted problem | What the owner sees |
|---|---|---|
| K01 | GSTIN cancelled; Udyam no. missing | GST services blocked; non-GST bundle offered |
| K02 | Photo tilted 7° | Straightened, matched by name → verified |
| K04 | GST certificate blurry | “Retake in good light” |
| K05 | No Udyam certificate | Found in Udyam records — no upload |
| K06 | GSTIN fails check digit | Flagged; suggests the registered GSTIN |
| K07 | Name differs from GST records | Flagged as a possibly edited certificate |
| K10 | OCR misread I↔J | Auto-corrected via registry → verified |
| K11 | Electricity bill 257 days old | “Upload a bill from the last 90 days” |

**K03, K08, K09, K12 pass clean · all 12 run as automated tests**

## DPDP Act 2023 by design

- Consent: per-purpose toggles, versioned, withdrawable
- Minimisation: server receives fields, never images
- Purpose: KYC data used only to activate; no marketing by default
- IDs masked in UI, logs, partner console
- Retention: chats 30 d, unconverted leads 90 d, auto-deleted

# People where they add value: the journey hands partners warm, scored leads

Field visits cost ~6× a referral or inbound lead.

**Self-serve (80% of volume)**

Micro shops and offices buy online; partners earn the same commission on digital orders from their pin code.

**Hand-off in one tap**

“Talk to a person” from advisor, quote, KYC or chat lands in the partner console with bundle, language and stage.

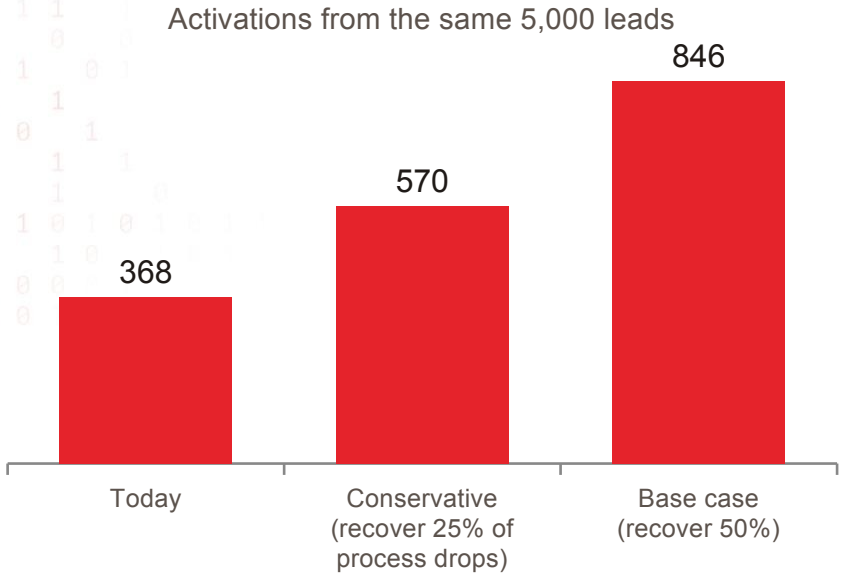

**Call list ranked by propensity (AUC 0.712)**

Logistic model on lead-time features; next best action per drop reason (e.g. “no fibre → offer AirFiber”).

**Partners own the hard 20%**

Multi-site, leased lines, site surveys and installs — routed to someone who speaks the owner's language.

# Same spend, more customers: +55% to +130% activations a quarter

Model: funnel stage rates from smb_leads.csv; only drops our screens remove are recovered (unreachable leads excluded).

**₹9,718 → ₹6,548**
CAC with today's ₹5.5M quarterly spend (from ₹15,053), before cutting any visits

**+₹1.7–4.0 Cr**
new ARR per quarterly cohort (202–478 extra activations × ₹6,900 median bundle)

**17.6 → ~5 days**
to live: fibre in 5 days, AirFiber in 2; KYC no longer waits on visits

**1 bill, 1 number**
for the owner instead of 4–5 vendors; a kirana's whole setup is ₹2,546/month

# Five numbers we would run the business on

| Metric | Today | 90-day pilot | Year 1 | Lever |
|---|---|---|---|---|
| **Lead → activation** | 7.4% | 11% | **15%** | Self-serve + recovered process drops |
| **Days from lead to live** | 17.6 | 7 | **5** | Instant quote & KYC; AirFiber when no fibre |
| **Status chases per customer** | 3 | 0.5 | **0.2** | Tracker; 5 chases today ⇒ 28% churn |
| **Blended CAC** | ₹15,053 | ₹10,000 | **₹6,000** | Digital first; micro ≤ ₹3,000 |
| **6-month churn** | 15.2% | 12% | **10%** | Faster, quieter onboarding; right-sized bundles |

Guardrails: KYC first-pass rate ≥ 80% · NPS ≥ 8 · zero ineligible activations · AI fallback rate tracked per language.

# Rollout in three steps, with the risks we have already designed for

**Weeks 0–6**

## Connect

GSTN/Udyam via a GSP, DigiLocker, Aadhaar e-sign, UPI AutoPay, OSS provisioning events

**Days 1–90**

## Pilot

Pune + Nagpur (Marathi/Hindi), professional offices + micro, 2 channel partners, weekly metric review

**Quarter 2–4**

## Scale

10 cities; Tamil, Telugu, Kannada, Gujarati, Bengali; WhatsApp Cloud API; multi-site with partners

| Risk | Mitigation already in the design |
|---|---|
| **AI gives a wrong answer** | AI never picks products or prices; the rules engine does, and the server re-checks every order |
| **Forged or mismatched documents** | Check digit, registry status and name/address match; mismatches go to manual review |
| **Channel conflict with partners** | Pin-code commission on digital orders; partners get scored hand-offs |
| **Fibre not feasible at the site** | AirFiber fallback offered automatically (41 drops last quarter) |
| **Low digital comfort** | Voice, three languages, WhatsApp-style chat, a person one tap away |
